AMENDMENT UNDER 37 C.F.R. § 1.111 U.S. Appln. No. 09/845,322

et l

an optical fixing section, downstream of the thermal developing section, which irradiates visible light for fixing the developed image.

12 (Amended): An image-recording apparatus comprising:

a casing section which encases light and heat sensitive recording material;

an optical recording section, downstream of the casing section, which exposes, using at least a short wavelength light source that has an intensity maximum in a wavelength range of 300 to 450 nm, the light and heat sensitive recording material, which has been fed from the casing section, for recording a latent image;

a thermal developing section, downstream of the optical recording section, which develops the latent image by heating; and

an optical fixing section, downstream of the thermal developing section, which irradiated visible light for fixing the developed image.

Kindly add the following new claims:

X5

- 19. (New): The apparatus of claim 1, wherein the optical fixing section irradiates light onto the light and heat sensitive recording material to fix the developed image thereon.
- 20. (New). The apparatus of claim 12, wherein the optical fixing section irradiates light onto the light and heat sensitive recording material to fix the developed image thereon.
